

Measurement guide

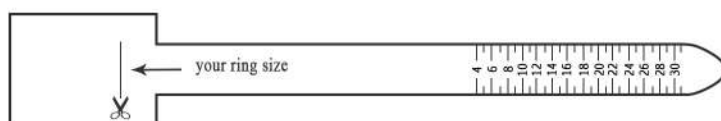

Welcome to the measurement guide of “**Le Colonne Taormina**”. The instructions to see your accurate ring size are reported here.

Measure **1** your finger

Please print this guide making sure that the printer keeps the scale of 100%, distortion-free. You can also do a test to make sure you have printed the sheet correctly by making a measurement with a ruler on the meter that you can find here:

Cut out the following meter by following its contours with precision;

Insert the paper band into the slot where there is the scissors symbol;

Wrap the meter around your finger making sure it is tight without tightening,- but neither excessively loose. Do not leave out to measure your knuckles.

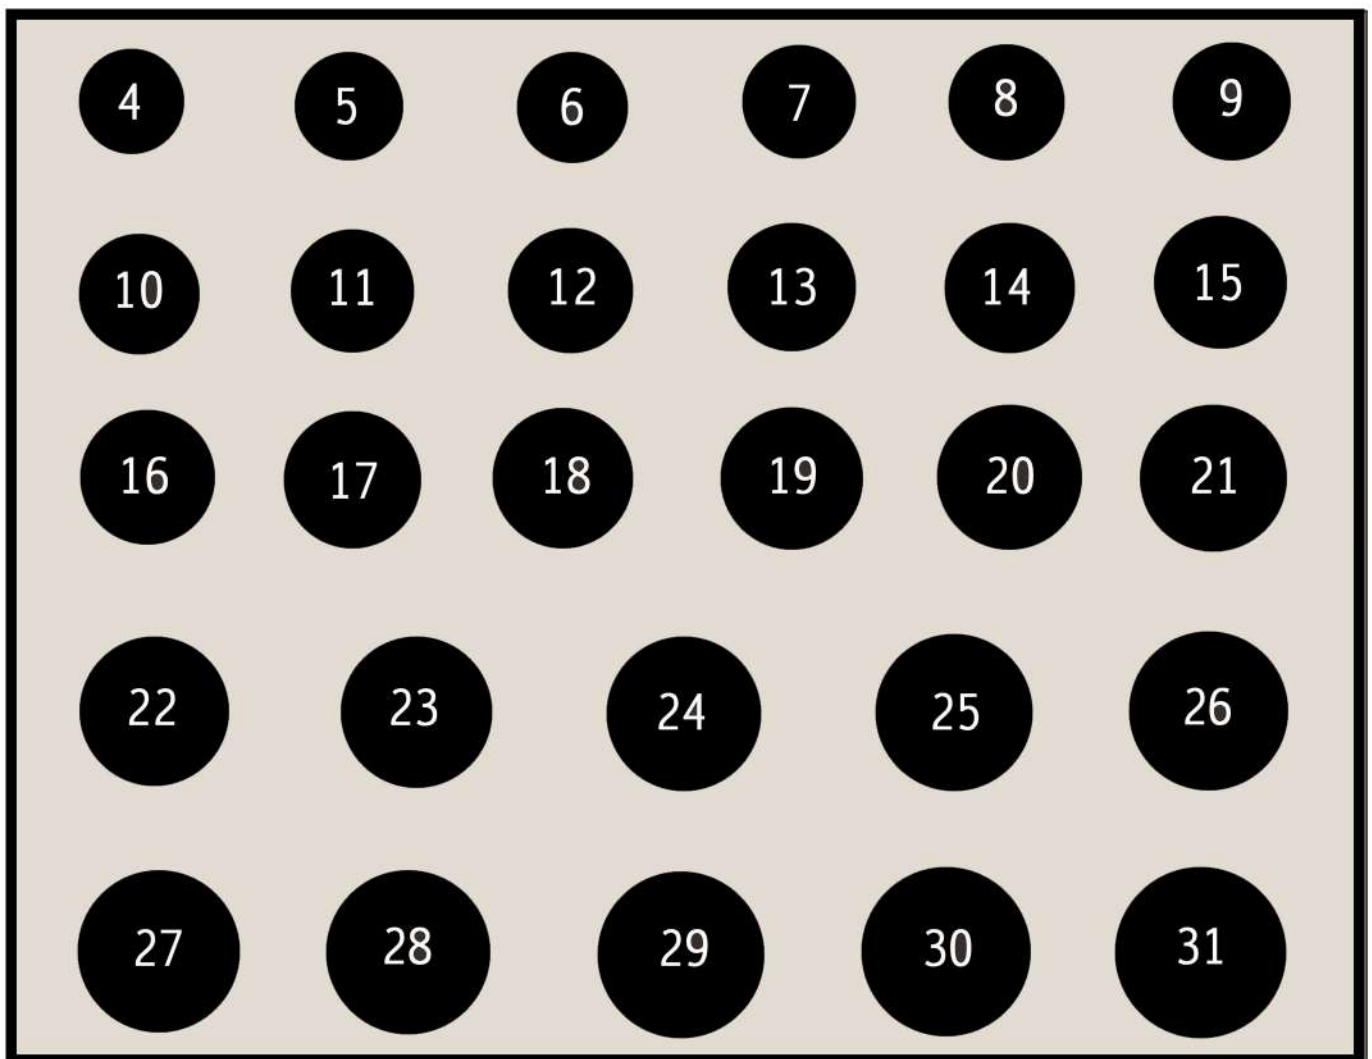

We remind you that the measurement of the hands varies depending on the temperature. Please take more measurements during the day for more reliability.

Measure ² a ring

It is possible to obtain the measure for your “**Le Colonne Taormina**” ring starting from the measure of the circumference of a ring that you already have.

After printing the guide with 100% proportions place carefully the ring on the following chart making the inner circumference of the ring coincide with the circles in which the measurements are marked;

When in doubt between two different measures we suggest to prefer the bigger one;

Measure the diameter

Measure the diameter of a ring in your possession using a calliper or a ruler can provide the measure and constitute a possible verification for the previous method.

Measure the inner diameter and compare the measurement with the chart below.

italian size	US size	inner diameter (mm)	inner circumference (mm)
4	3	14,00 - 14,10	44,00 - 44,3
5	3	14,20 - 14,40	44,60 - 45,20
